The Chinese University of Hong Kong, Shenzhen

CSC4801
AI-assisted Software Engineering

Lecture 00: Introduction

Instructor: Jinsheng Ba | 2026 Fall

About Me

2020-2024

Ph.D.

Singapore

2024-2026

Postdoc

Zurich, Switzerland

ETH zürich

2026-?

Assistant Professor

Shenzhen, China

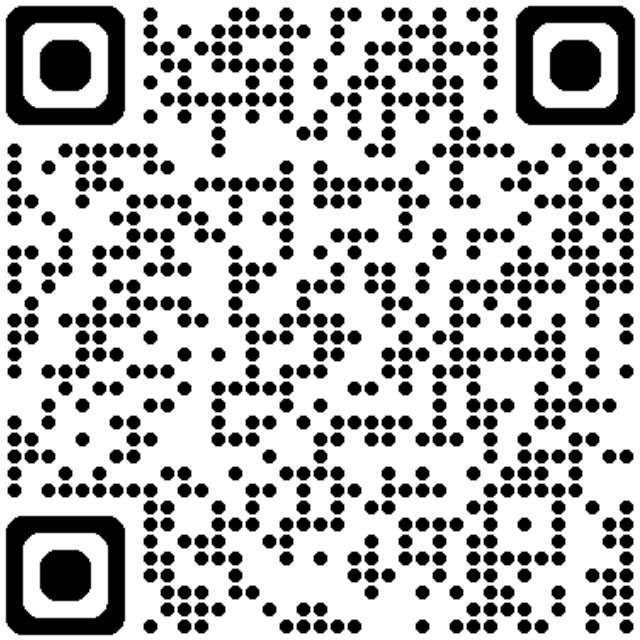

About Me

Research topics:

- AI4SE
  - How to guarantee the reliability of LLM-generated code?
- SE4AI
  - How to build better coding agents?
- Self-evolving systems

About This Course

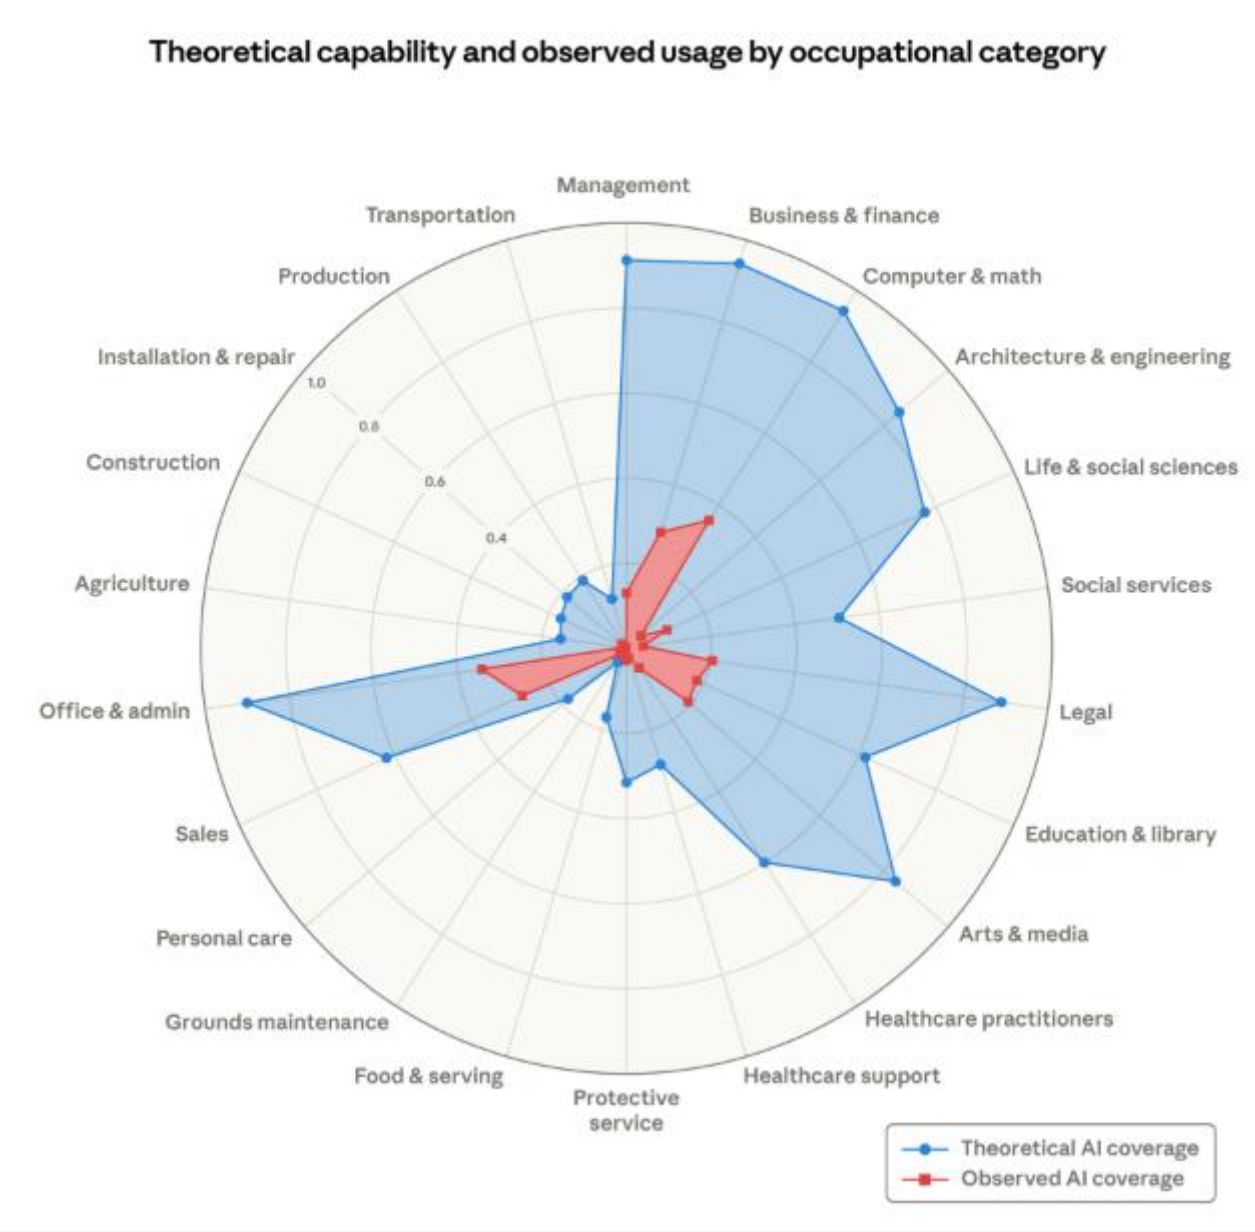

CSC4801

AI-assisted Software Engineering

CSC4801 is offered by The Chinese University of Hong Kong, Shenzhen (CUHK-Shenzhen). It is a hands-on course on building software with coding agents. It moves through three stages: first the **basis** — how AI and large language models work, and how they support software engineering; then the **techniques** — the basic methods of applying AI across the engineering lifecycle; and finally the **application** — a real-world team project where you practice using AI to build, test, and secure a working product.

TERM	TIME	LOCATION	FORMAT
Fall 2026 · 14 weeks Sep 8 – Dec 17	Tue & Thu · 8:30–10:00	Teaching C Building 210 TBD	Lectures

Building a C compiler with a team of parallel Claudes

Published Feb 05, 2026

We tasked Opus 4.6 using agent teams to build a C Compiler, and then (mostly) walked away. Here's what it taught us about the future of autonomous software development.

Software Engineering

AI-Assisted Software Engineering

Is it a vibe coding course?

Not only

What You Will Learn

- The basic principles of LLMs and coding agents
- The roles of developers in AI era
- The skills of using AI in requirement engineering, coding, testing, and so on
- State-of-the-art research of applying AI in software engineering

What You Will NOT Learn

- How to use AI to replace human
- Deep LLM architectures and training
- Traditional software engineering (Covered in CSC4001)
- Programming skills
- APIs and frameworks
- Interview skills

Goal

1. Basis
Learn how AI/LLM work and how they support software engineering

2. Techniques
Learn the basic methods of using AI in software engineering

3. Application
Do a real-world project to practice the usage of AI in software engineering

Teaching Plan (Tentative)

Evaluation Criteria (Tentative)

Components	**Weight**
3 * home works	30%
2 * quizzes	20%
Course Project	50%

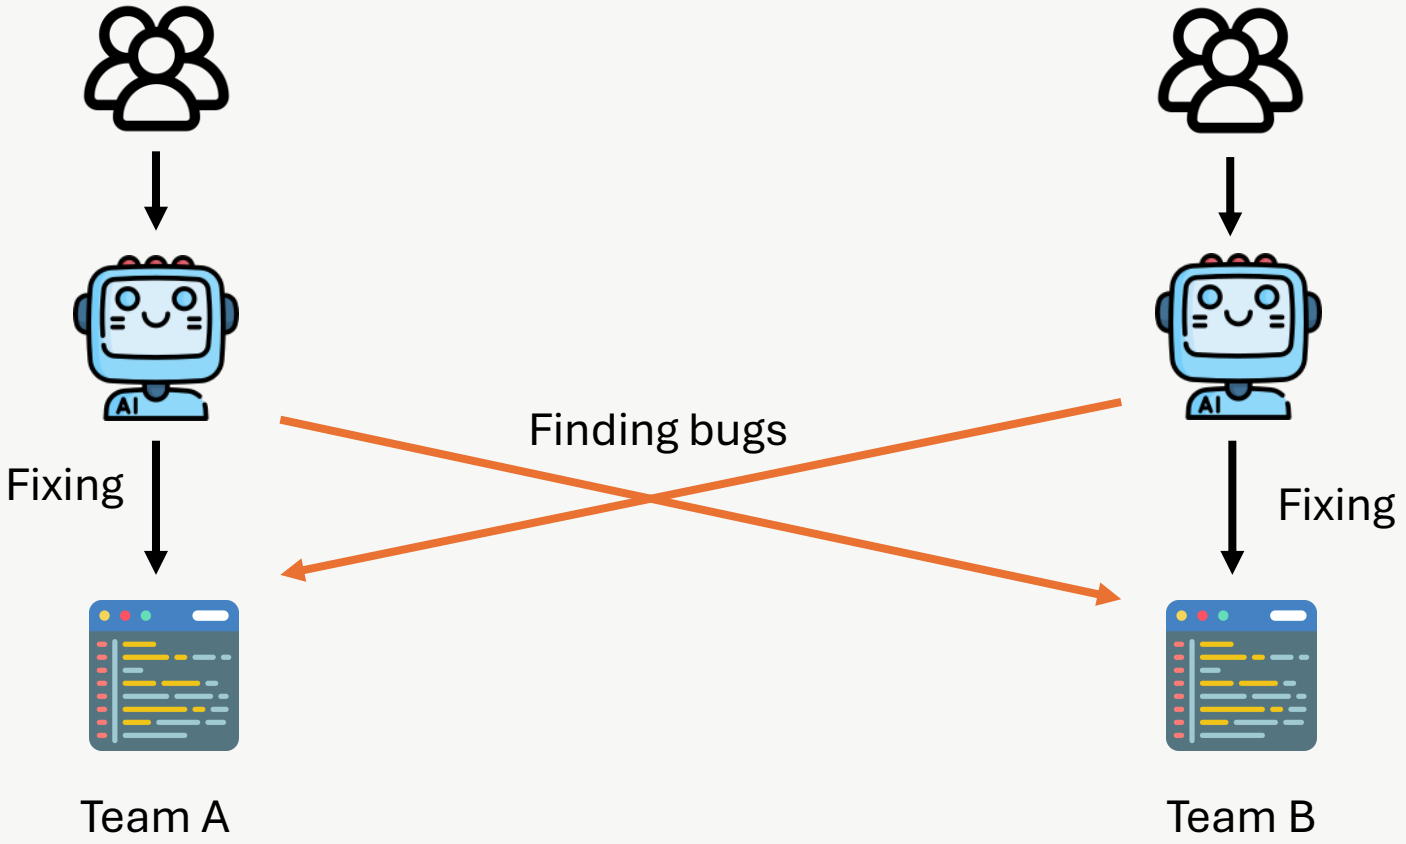

Assignments (30%)

- 3 assignments, 10% each
- Coding tasks and reports
- Release on Sep 24, Oct 15, Oct 29
- Late submission
  - A 10% deduction of the assignment's total marks will be applied for each day of late submission. If the submission is more than 3 days late, a score of zero will be given for this assignment.

Quizzes (20%)

- 2 quizzes, 10% each
- Single- and multiple-choice questions
- Oct 27 & Nov 17

Interactive Project (50%)

Interactive Project (50%)

- 3 students as a group
- Evaluation criteria
  - Requirement fulfillment
  - Bug Finding and fixing
  - Presentation
- More details in week 3

Office Hour

- Tuesday 10-11 am
- Room 319A, Daoyuan Building

Teaching Assistants

- Xiaoyuan Liu (Lead)
  - Third-year PhD

Requirement Example

tasks.md

tasks.md > ...

```
---
description: "Task list template for feature implementation"
---

# Tasks: Photo Organizer

**Input**: Design documents from `/specs/001-photo-organizer/`

**Prerequisites**: plan.md (required), spec.md (required for user stories), research.md, data-model.md, contracts/api.md

**Tests**: TDD is strict; tests MUST be written before implementation.

**Organization**: Tasks are grouped by user story to enable independent implementation and testing of each story.

## Format: `[ID] [P?] [Story] Description`

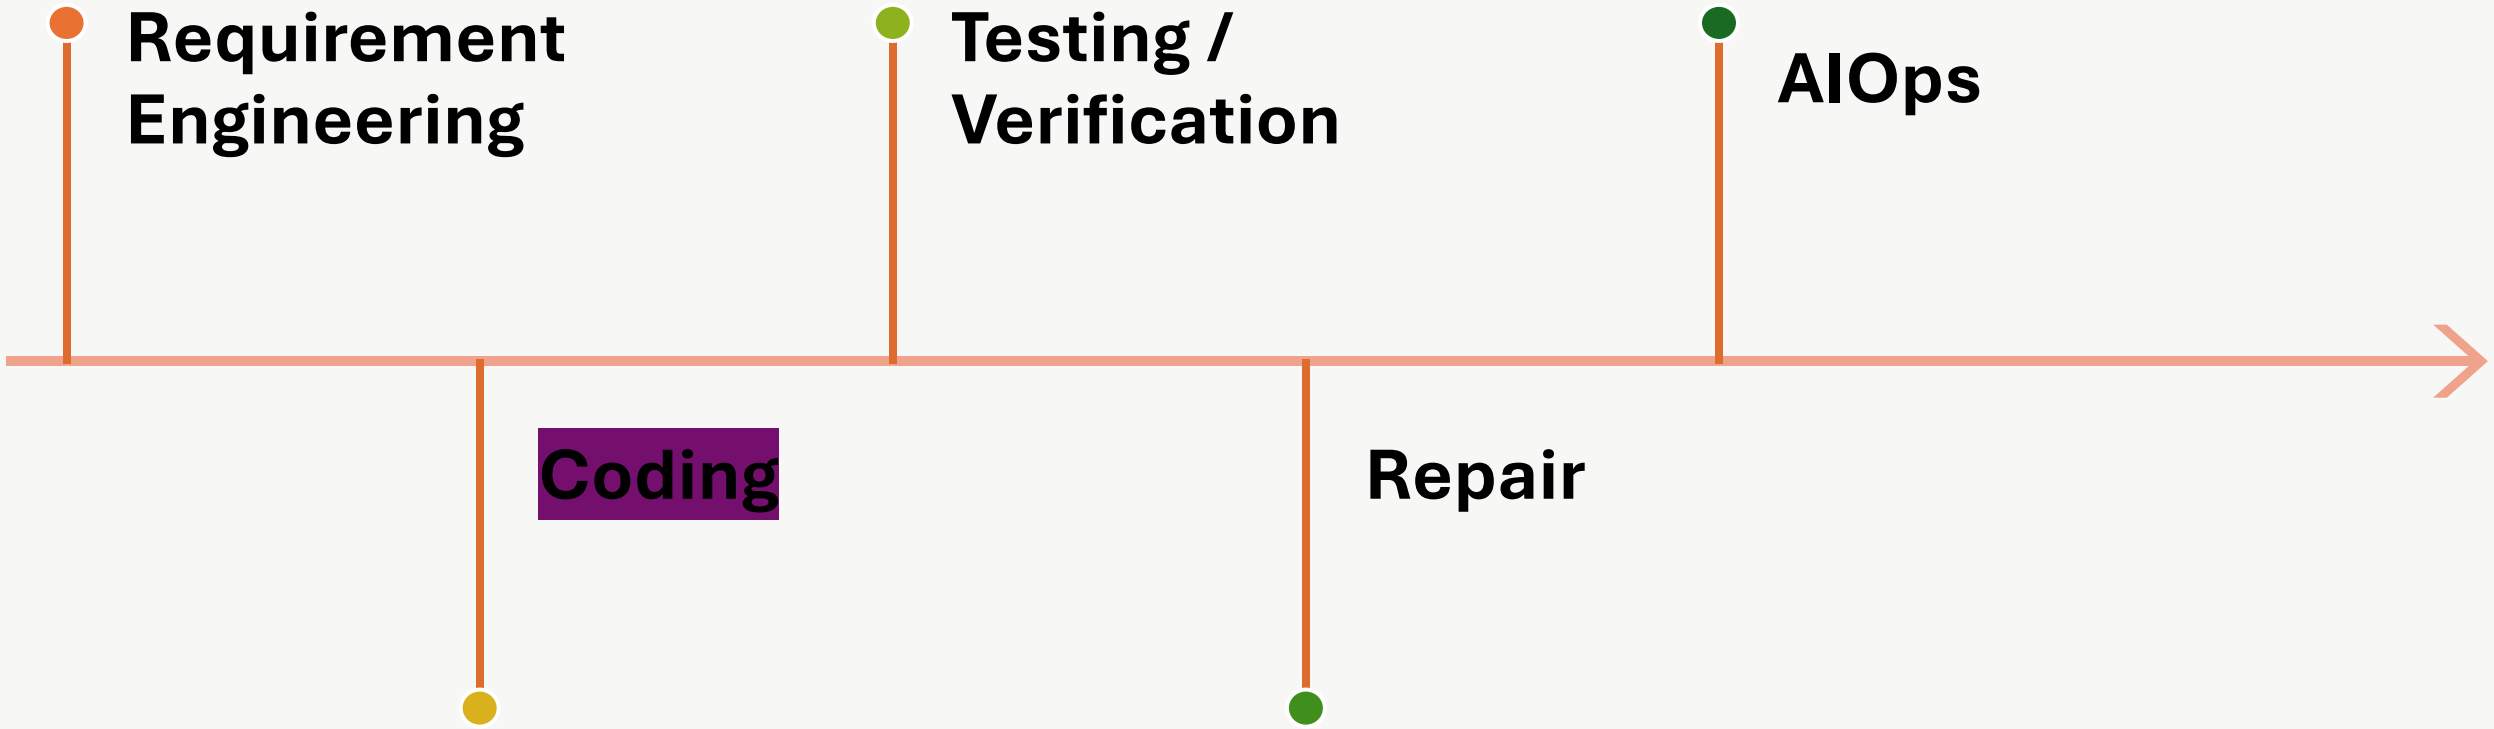

- **[P]**: Can run in parallel (different files, no dependencies)
- **[Story]**: Which user story this task belongs to (e.g., US1, US2, US3)
- Include exact file paths in descriptions

## Phase 1: Setup (Shared Infrastructure)

**Purpose**: Project initialization and basic structure

- [ ] T001 Create project structure per implementation plan (backend and frontend folders)
- [ ] T002 Initialize Node.js backend project and install better-sqlite3, express, cors
- [ ] T003 Initialize Vite frontend project with Vanilla JS template
```
